

The Dynaco cleanroom door

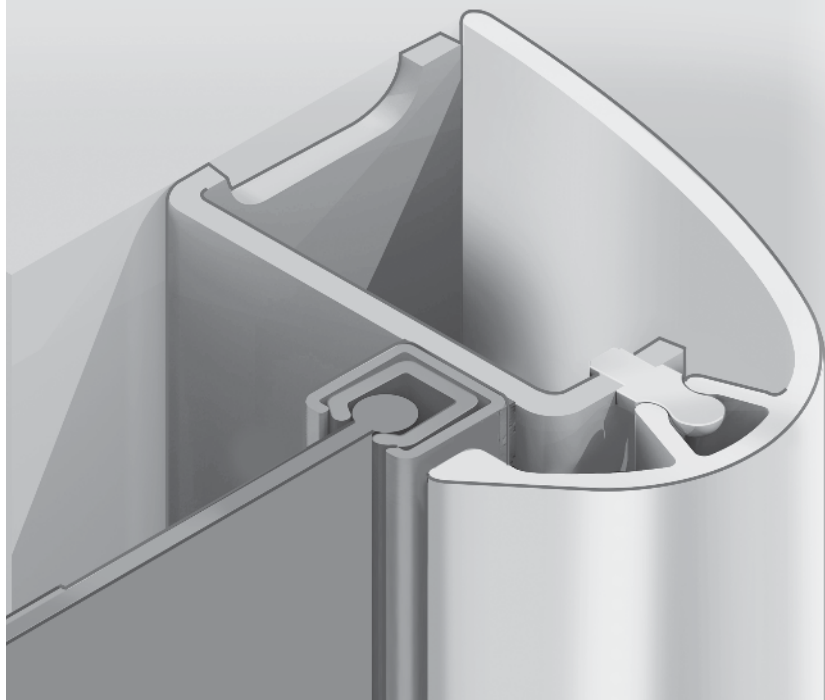

The new generation high speed doors

Your best asset
to preserve
conditioned air

- A perfect seal over the full perimeter of the door, reducing air leakage.
- A smooth surface, avoiding accumulation of impurities.
- A reduced footprint, for easy integration.

AVOID CONTAMINATION

Minimal cycle time, advanced multi-interlocking possibility and airlock layout help to reduce air transfer and consequent contamination of valuable goods inside the cleanroom. By choosing the appropriate Dynaco solution, contamination has no chance to enter the cleanroom.

MAINTAIN PRESSURE

In cleanroom environments, it is important to keep critical areas in overpressure. The flexible Dynaco door curtain perfectly resists to pressure differences. The enduring tight seal keeps the pressure at the required level with limited air consumption over years.

KEEP CLEAN

The surface of the Dynaco door curtain is smooth and free of irregularities. It contains neither bars nor other parts that might accumulate impurities. In combination with a stainless steel structure, Dynaco doors are easy to clean.

ENERGY SAVING

One of the main reasons for installing a Dynaco door, is saving energy. The fast operation of the doors and the tightness of the seal help prevent conditioned air leaving the cleanroom and contaminated air coming in. Apart from avoiding all kinds of contamination problems, this results in significant savings on your energy costs.

SAVING SPACE

The installation of a Dynaco door requires very little space. Contrary to sliding doors, virtually no space is lost by installing a Dynaco door. It is even possible to install the side guides in the door opening and hide the header above the ceiling. This way, you can get the maximum out of your cleanroom area.

LOW NOISE OPERATION

The absence of slats in the curtain reduces building vibration. The specially designed retaining straps run smoothly in the side guides, thus reducing the operating noise. This is very important to increase user comfort in some areas.
