

The Dynaco D-313 door for retail

The new generation high speed doors

Your best asset to separate your storage

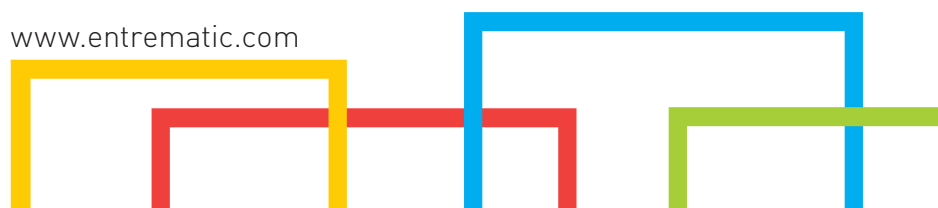

- A minimal footprint for an optimal sales surface.
- A perfect seal over the full perimeter of the door, limiting the transfer of air.
- A high speed operation to increase human productivity.

SPACE SAVING

A Dynaco door requires very little space. The side guides are only a few centimeters wide, and can also be integrated in sandwich panels. The top drive system can be hidden behind a false ceiling. That way you make optimal use of the available space as sales surface.

ENERGY SAVING

One of the main reasons for installing a Dynaco door is to avoid draughts. The fast operation of the doors and the tightness of the seal help prevent draughts from the storage entering the sales area. This way, you provide a pleasant shopping environment to your customers and you save on your energy costs at the same time.

SEPARATION

In retail it's important to keep dust, dirt and pests out of the sales area. Also, you prefer to keep the storage area out of sight for your customers and keep your customers out of the storage area. A Dynaco door provides a nice, perfectly sealing separation.

SPEED AND EFFICIENCY

In a retail environment, time is crucial. A Dynaco door opens and closes at high speed. This way, you can seal off your storage area, without creating a barrier. Your employees do not lose time by opening and closing doors. On a yearly basis, this saves a lot of man hours and increases your productivity. The self-reinserting door curtain and the limited maintenance assures uninterrupted activity.

EASE OF USE

A Dynaco door opens and closes fully automatically. By means of a timer, you can determine how long the door remains open. Different types of opening commands ease up the lives of your employees: pull cords, radars, infrared photocells... You choose what best suits you. Your Dynaco door operates so smoothly, you even forget she's there.

ADDITIONAL ADVERTISING SPACE

A Dynaco door is not just part of the infrastructure. A printed door curtain is an efficient way to use this enormous advertising space. You attract the customer's attention and you can offer your suppliers the possibility to place their advertising... A way of making your investment pay twice.
