

The ideal solution
For your processes

The **ECOSPRINT** high-speed door is at home in logistics, industry, airports, mail order or production.

Or rather, everywhere where work is done.

With the aim of

- separate individual areas from each other
- to reduce draughts and heat exchange
- save energy and
- create a safe process for people and goods flow, the ECOSPRINT offers the solution.

In addition, the full clearance height is immediately available with the side opening and collision damage is minimised.

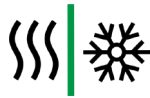

High-speed doors **ECOSPRINT®**
Sophisticated. Functional. Inexpensive.

Inexpensive & energy saving

Horizontal & space saving

Less heat loss due to high closing speed

Anti-crash protection prevents damage to the door

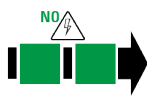

No dripping of dirty water

View-through is constantly available at eye level

Secure logistics processes

Currentless opening in an emergency

> 1000.000 Opening cycles

Stacking doors SPACELITE

- Space-saving lifting relay technology
- Triple safety through anti-fall device, safety edge device and overrun protection

Sectional doors SECTIOLITE

- Burglar-proof
- Wind load resistant
- Low drop requirement
- High opening speed

High-speed doors NOVOSPRINT

- Horizontal opening principle
- Wide range of equipment options
- Ideal for industry, logistics and airports

Hangar doors

- One hundred percent reliability and operational safety
- Best lighting conditions
- Individual project support from the first draft to service

BUTZBACH - THE DOOR COMPANY.

Fast, safe, efficient.

High-speed doors **ECOSPRINT®**

BUTZBACH - THE DOOR COMPANY.®

One door
Two possible versions

When choosing an ECOSPRINT door to suit your requirements, you can choose between two versions: ECOSPRINT Syncro and ECOSPRINT Mono.

ECOSPRINT® Syncro

The classic Butzbach high-speed door that rolls the door skins of both door halves to the side in a fraction of a second. The entire passage height is immediately available. This principle is superior to conventional doors in all aspects: through flexibility in adapting to your requirements, protection against collision damage, maximum reliability and economic efficiency in the long term.

ECOSPRINT® Mono

The space- and time-saving solution for unhindered and contactless pedestrian traffic. As a single-sided rolling high-speed door, the ECOSPRINT Mono was specially developed for narrow passages.

Field of application further thought
Your benefit

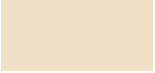

In many situations, the ECOSPRINT is the most elegant option to limit a passage.

Advantages compared to:

Sliding doors	<ul style="list-style-type: none"> - Installation width can be used completely as a passageway - Faster opening and closing - Low lateral installation space requirement
Swing doors	<ul style="list-style-type: none"> - No additional swivel range - Undisturbed and unrestrained process flow - Contactless and tension-tight closure
Vertical high-speed doors	<ul style="list-style-type: none"> - Full passage height immediately available - No dripping of dirt or water - No visual impairment due to closing edge moving upwards

A good choice
Easily designed

The ECOSPRINT can be ordered up to a size of 3500 mm x 3500 mm. For the tarpaulin colour, you have a free choice from a wide range of colours.
